

Uintalands Water System Cross Connection Prevention

Cross-connections are points in a plumbing system where nonpotable substances can come into contact with potable drinking water.

Examples

- **Garden hose** -A garden hose connected to a chemical spray bottle or submerged in a bucket of soapy water , or bucket for wildlife.
- **Water-using devices** -Improperly plumbed water-using devices like hot tubs, boilers, dishwashers, water softeners or fire suppression systems, that can allow unsafe water back into the piping system .

Authority

- Rules and Regulations of the Uintalands Association address cross connections, and backflow incidents.
 - \$2,000 mandatory fine, Shutting off member's water, and/or possible lien placed on member's property.

Uinalands Water System Cross Connection Prevention

- Garden Hose – Frost free hydrants

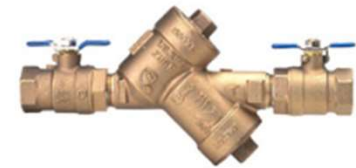

Uinalands Water System Cross Connection Prevention

- Cabins – water supply line.
- Before any connections inside the cabin.

- Visit Uintalands website for water system connection requirements or contact any board member.

Water

Selling, buying, or constructing water system work anywhere in the Association requires that certain standards, specification, regulations, and documents are obtained and complied with. Please contact the business manager ([Brian Stecklein](#)), a board member or caretaker ([Doug Madsen](#)) for the information packets, documents, and standards prior to these activities. See the [Contact Us](#) page for contact information.

For those wishing to attach to the Uintalands water system here is the form required to begin the process: [Water Connection Form Updated 2024](#)

Water System Replacement

Please use the following diagram when working with your contractor to add or replace your water system. The caretaker or a board member from the Water Committee must inspect your system before it is buried. If this doesn't happen water will not be available to you.
